

Unlock the Future of Content with AI-Powered Intelligence

Encore is a modern, AI-driven Content Services Platform (CSP) designed to help enterprises unlock the full potential of their unstructured content. In partnership with industry leaders MongoDB and Amazon Web Services (AWS), Encore delivers a powerful, cloud-based content management solution that transforms unstructured data into a strategic asset. These partnerships ensure seamless scalability, high performance, security, and reliability—empowering organizations to integrate content into their broader strategy, uncover meaningful insights, and drive smarter decision-making.

The Data Challenge

80%

In 2024, 80% of daily data generated was unstructured. (IDC)

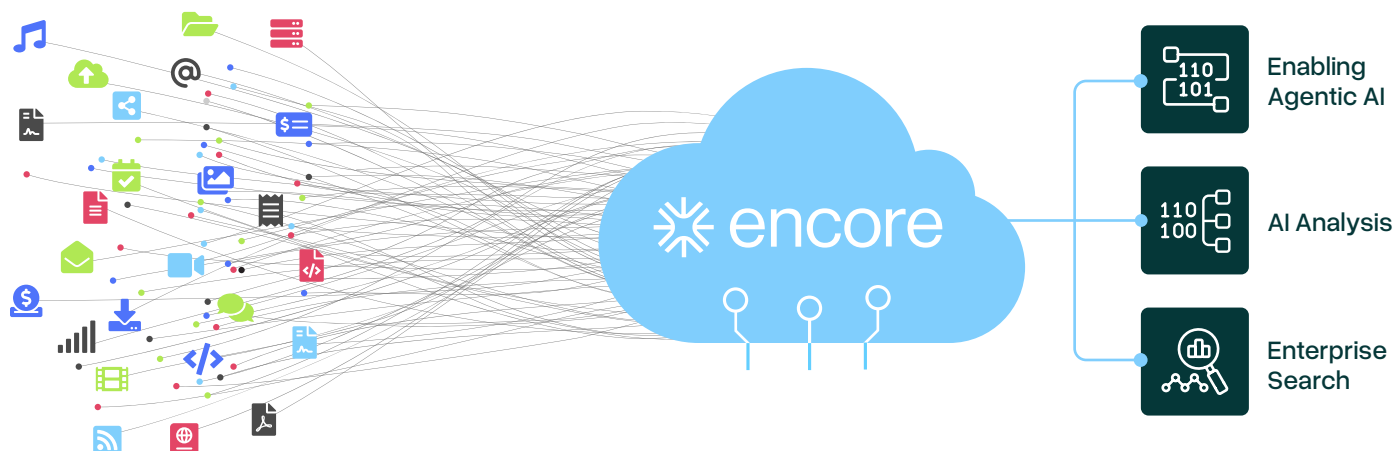

Managing business content is more complex than ever. Contracts, emails, reports, and images accumulate daily, making it difficult to find and use critical information when it matters most.

80% of the data generated daily is unstructured, according to IDC (2024). With unstructured data growing at an annual rate of 65%, traditional Enterprise Content Management (ECM) systems lack the intelligence and agility to process and extract value from this content.

As a result, organizations face operational inefficiencies, increased costs, and limited visibility into their most valuable information.

65% 

Unstructured data grows at an astounding 65% annually.

Transforming Unstructured Data into Business Value

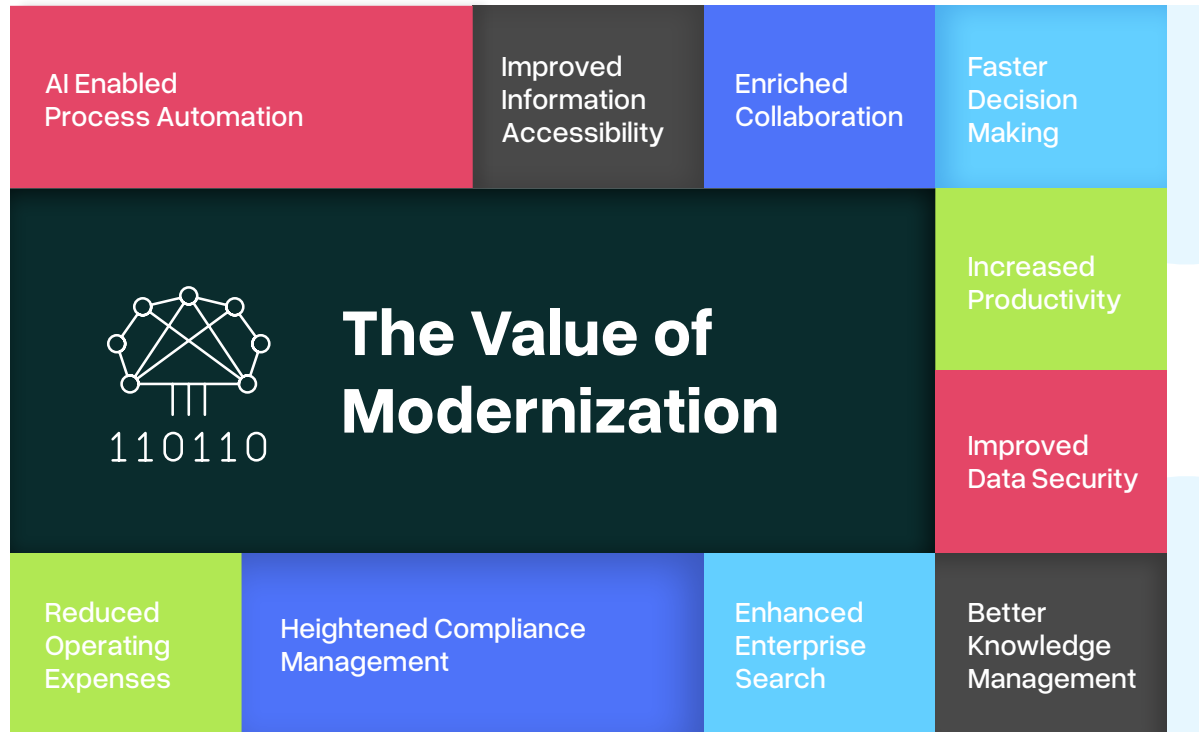

Encore modernizes content management by leveraging AI to extract, classify, and structure data for better decision-making. Designed for scalability, it replaces outdated ECM systems with a cloud-native approach that automates document processing, enhances search, and streamlines workflows.

Encore ensures high availability and reliability, keeping critical content protected and accessible as business needs evolve. AI-powered automation reduces manual effort, allowing teams to focus on higher-value work while improving efficiency and compliance.

Built for Today's Digital Business

Encore harnesses AI, cloud computing, and NoSQL databases to deliver high performance and scalability. Built on MongoDB and AWS, its cloud-native architecture eliminates costly infrastructure while ensuring seamless integration with enterprise systems.

Natural language search and machine learning analytics enhance data retrieval and risk assessment, while an open API architecture ensures seamless integration with existing enterprise systems.

Why Choose Encore?

Backed by decades of enterprise content expertise, Encore helps businesses transition from legacy ECM systems to a scalable, AI-driven CSP. Its open API and cloud-first design ensure seamless integration and long-term scalability, providing organizations with a future-ready solution for managing critical business content.

Unlock the Full Potential of Your Content

Request your personalized demo today and discover how Encore can revolutionize your Content Services strategy, drive smarter decisions, and unlock new growth opportunities.
